

IMMEDIATE ACTION PLAN - FIRST 3 CUSTOMERS

Created: January 8, 2026, 1:00 AM GMT

PHILOSOPHY: Revenue First, Polish Later

You have built an impressive foundation. Now it's time to test if anyone will pay for it. This document contains everything you need to get your first 3 pilot customers in the next 48-72 hours.

THE OFFER (Keep It Simple)

FREE 2-Week Trial → \$150/month Starter Pilot

What they get:

- I'll manually connect to their Shopify store
- Every Monday morning: Email with 4-week sales forecast
- Every Thursday: Inventory restock recommendations
- Quick wins visible in 7-14 days

What you DON'T mention:

- Your GitHub repo
- Machine learning / AI terminology
- The tech stack
- Future features

Why: They buy outcomes (better forecasts), not technology.

TARGET: 3 PERSONALIZED OUTREACH MESSAGES

PROSPECT #1: Tech Accessories Hub (500+ orders/month)

Subject: Quick idea for Tech Accessories Hub's inventory planning

Hi [Name],

I came across Tech Accessories Hub while researching Shopify stores in the electronics space. With 500+ orders per month, I imagine inventory forecasting is getting complex—especially balancing fast movers vs. slow movers.

I'm running a pilot program for e-commerce stores where I provide:

- Weekly 4-week demand forecasts (which SKUs will spike/drop)
- Automated restock alerts before you run out
- Data pulled straight from your Shopify + GA

Would you be open to a free 2-week trial? I'll send you your first forecast by this Monday (no setup needed on your end—just Shopify API access).

If it saves you even 2 hours/week on spreadsheet forecasting or prevents one stockout, it pays for itself.

Interested in a quick 15-min call this week?

Best,

[Your Name]

[Your Email]

PROSPECT #2: Outdoor Adventure Co (350-450 orders/month)

Subject: Helping Outdoor Adventure Co predict seasonal demand

Hi [Name],

I've been following Outdoor Adventure Co's growth—congrats on the momentum! I work with outdoor/sporting goods brands on a specific problem: predicting seasonal demand spikes before they happen.

Most outdoor brands I talk to struggle with:

- Overstocking winter gear in summer (capital tied up)
- Running out of popular SKUs during peak season
- Manual forecasting in spreadsheets taking hours

I'm offering a free 2-week pilot where I'll:

1. Pull your Shopify sales data (last 12 months)
2. Build a custom 4-8 week forecast model
3. Send you weekly predictions every Monday

If you like it after 2 weeks, it's \$150/month. If not, no charge.

The brands I'm working with are seeing 20-30% improvement in forecast accuracy within the first month.

Worth a 15-minute intro call?

Best,
[Your Name]
[Your Email]

PROSPECT #3: Office Essentials Plus (400-500 orders/month)

Subject: Quick question about Office Essentials' inventory planning

Hi [Name],

I noticed Office Essentials Plus serves both B2B and B2C customers—that's a smart model but must create some interesting inventory challenges (bulk orders vs. one-off purchases).

I'm launching a forecasting service specifically for multi-channel sellers. Here's how it works:

- I connect to your Shopify account (read-only API)
- Every week, you get an email with:
 - 4-week sales forecast by SKU
 - Restock recommendations
 - Anomaly alerts (if something's trending up/down unexpectedly)
- First 2 weeks are free to test
- After that, \$150/month if you want to continue

I'm targeting stores doing 300-500 orders/month because that's the sweet spot where forecasting becomes valuable but hiring a data analyst isn't justified yet.

Interested in trying it out? I can have your first forecast ready by Monday if you're in.

15-min call this week to discuss?

Best,
[Your Name]
[Your Email]

HOW TO SEND (Action Checklist)

- ☐ Option A: LinkedIn InMail (Highest Response Rate)
 1. Search for each company on LinkedIn
 2. Find founder/CEO or Head of Operations

3. Send connection request with short note
4. If accepted, send the personalized message above

□ Option B: Direct Email (If you can find it)

1. Use Hunter.io or RocketReach to find contact emails
2. Send from your personal email (not a marketing tool)
3. Follow up in 3 days if no response

□ Option C: Contact Form on Their Website

1. Go to their "Contact" or "About" page
2. Paste the message (slightly shorter version)
3. Less effective but better than nothing

IF THEY SAY YES - MANUAL MVP DELIVERY

****Week 1 Setup (30 minutes per customer):****

1. Get their Shopify API credentials
2. Run your connector.py to pull 90 days of order data
3. Export to CSV
4. Load into Jupyter notebook
5. Run Prophet forecast on top 20 SKUs
6. Screenshot the charts

****Week 1 Delivery (Monday morning):****

Email them:

Subject: Your 4-Week Sales Forecast - Week of [Date]

Hi [Name],

Here's your first forecast based on the last 90 days of Shopify data:

TOP MOVERS (Next 4 Weeks)

- [Product A]: Predicted to increase 23% - Consider restocking
- [Product B]: Predicted to drop 15% - Hold off on reorders
- [Product C]: Steady demand - Current stock levels OK

ALERTS

- [Product D] may hit stockout by [Date] at current velocity
- [Product E] showing unusual spike - check if promo-related

Full forecast chart attached.

Questions or want me to dig into specific SKUs? Just reply to this email.

Next forecast: Monday, [Date]

Best,
[Your Name]

****Week 2: Refine based on feedback****

****Week 3: Ask if they want to continue at \$150/month****

IF THEY SAY NO - LEARN AND ITERATE

Ask them:

"Thanks for considering it! Just curious—what would have made this more compelling for you?"

Common objections & responses:

- "Too expensive" → Offer \$99/month or free first month
- "Don't have time to set up" → Offer to do entire setup on a call
- "Not sure we need forecasting" → Ask what their biggest inventory challenge is
- "Already using [tool]" → Ask if it's actually working or just sitting there

SUCCESS METRICS - NEXT 7 DAYS

- ✓ Day 1: Send 3 personalized outreach messages
- ✓ Day 2-3: Follow up if no response
- ✓ Day 4-5: Get 1 intro call scheduled
- ✓ Day 6: Set up first pilot customer (even if free)
- ✓ Day 7: Deliver first forecast to pilot #1

If you get 1 paying customer (\$150/month) from this outreach, that's \$1,800/year ARR from ONE EMAIL.

WHAT NOT TO DO

- ✗ Don't code more features until someone asks for them
- ✗ Don't build a fancy website until you have 3 paying customers
- ✗ Don't wait until the connector is "fully automated"
- ✗ Don't overthink the pricing - \$150 is cheap enough to say yes
- ✗ Don't mention "AI" or "machine learning" in outreach (sounds expensive/complex)

THE COMPOUNDING EFFECT

Customer 1 (manual delivery) → You learn what they actually need

Customer 2 (semi-manual) → You automate the painful parts

Customer 3 (mostly automated) → You have a repeatable process

By customer 5, you're spending 30 min/week per customer instead of 3 hours.

By customer 10, you have \$1,500 MRR and 2-3 case studies.

By customer 20, you can hire someone to handle delivery while you sell.

FINAL THOUGHT

Your GitHub repo is excellent. Your documentation is thorough. Your technical foundation is solid.

But none of that matters until someone pays you money.

The goal of these 3 emails isn't to be perfect. It's to start conversations.

Send them today. Learn from the responses. Adjust.

You're one email away from your first customer.

Good luck. You've got this.

QUICK REFERENCE - COPY/PASTE READY

Your Elevator Pitch (15 seconds):

"I help Shopify stores with 200-500 orders/month improve their sales forecasts by 20-30%.

Every week, you get an email telling you exactly what to restock and what's about to spike.

First 2 weeks free, then \$150/month if you like it."

Your LinkedIn Connection Request:

"Hi [Name] - I help e-commerce businesses like [Company Name] with inventory forecasting. Would love to connect!"

Your Follow-Up (3 days later):

"Hi [Name] - Just following up on my email about the forecasting pilot. Still interested in a quick 15-min call this week? Ha
